Most medical doctors say that vaccines do not cause injury or death, so it must be true.

Doctors who say vaccines are safe for everyone and do not cause injury and death are either uninformed, in denial or lying. Since the first vaccine for smallpox, doctors have known and it has been well documented that brain inflammation, permanent brain damage and death have always been among most serious complications of vaccination.1,2

Just like any other pharmaceutical product, vaccines carry a risk of injury or death. These risks can be greater for some people with genetic, biological and environmental risk factors that doctors do not understand or cannot predict.3

Congress, U.S. Supreme Court Say Vaccines Are “Unavoidably Unsafe”

Knowing this, Congress in 19864 and the U.S. Supreme Court in 20115 declared vaccines to be “unavoidably unsafe” and shielded drug companies from all product liability.6 If you or your child are injured or die after vaccination, you cannot hold the drug company that makes and profits from the vaccine or anyone who regulates, promotes, administers or mandates the vaccine accountable in a civil court of law in front of a jury of your peers.

Liability for Seat Belt Manufacturers - NOT for Vaccine Manufacturers

Seat belt manufacturers have product liability7 but vaccine manufacturers do not. Doctors can be sued for malpractice except when they administer vaccinations that injure or kill a person.

Vaccines are the only product government mandates and completely indemnifies.

The federal government has paid $3 billion dollars in compensation to victims of vaccine injury and death under the National Childhood Vaccine Injury Act of 1986.8
